Proposed Data Collections Submitted for Public Comment and Recommendations

In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 for opportunity for public comment on proposed data collection projects, the Centers for Disease Control and Prevention (CDC) will publish periodic summaries of proposed projects. To

request more information on the proposed projects or to obtain a copy of the data collection plans and instruments, call the CDC Reports Clearance Officer on (404) 639-7090.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques for other forms of information technology. Send comments to Seleda Perryman, CDC Assistant Reports Clearance Officer, 1600 Clifton Road, MS-D24, Atlanta, GA 30333. Written comments should be received on or before July 6, 1998.

Proposed Projects

1. The purpose of this study is to evaluate the reliability and validity of existing instruments that measure stress and stressful life events in black women of reproductive age. Eligible subjects will be black women who live in the Atlanta metropolitan area. Subjects will be recruited from flyers, newspaper announcements, hospitals and clinics in the metropolitan Atlanta area. Subjects will be screened and selected based on age (18-30 or 31-45 years), years of education (12, 13-15, 16 or more), and pregnancy status (pregnant, not pregnant). A maximum of thirty women will be selected for each combination of age, education and pregnancy status. The minimum age for participation will be 18 to avoid the complications due to requirement of parental consent. Women will be excluded if they use illicit drugs, such as heroin, cocaine and marijuana because these substances may alter the metabolism of cortisol. The contact, timing and spacing of the interviews and laboratory collection are based on the methodology developed and used for conducting reliability and validity tests. Approximately one half of the women will be pregnant at the time of data collection.

Women enrolled in the study respond to a series of face-to-face and self-administered demographic and psychosocial questionnaires. Women are also asked to provide a saliva sample so that we can correlate reported levels of stress with biological measures of stress.

Participation in this study is voluntary and participants will receive compensation of \$35 for their time. A
